RESULT 1 AAO19665 AA019665;

The present invention relates to a fusion molecule comprising a first polypeptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor (FcepsilonR). Also provided are nucleotide sequences encoding such a New fusion molecules comprising polypeptide sequences that bind to IgG inhibitory receptor and native IgE receptor, useful for treating IgE-mediated hypersensitivity reactions, e.g. asthma or allergies, or chain; Human; IgG1; immunoglobulin G; immunotherapy; immune disease; Fcepailon receptor; autoimmune disease; constant region; heavy antiasthmatic; antiallergic; antinflammatory; dermatological; antiarthritic; antirheumatic; antidiabetic; neuroprotective; Human IgG1 heavy chain constant region hinge-CH2-CH3 portion.                                                                                                                                                                                                                                                                                                                                                                  9
fusion protein. The fusion molecules and compositions are useful for treating an IGE-mediated biological response, preferably an IGE-mediated hypersensitivity reaction, such as sathma, allergic rhinitis, atopic dermatitis, severe food allergies, chronic urticaria, angioedema or anaphylactic shock; or autoimmune diseases such as rheumatoid arthritis, type-I diabetes mellitus, or multiple sclerosis, and for preventing of, or symptoms resulting from, a type I hypersensitivity reaction in a subject receiving immunotherapy. The present sequence is the human IgGI heavy chain constant region hinge-CH2-CH3 portion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New fusion molecules comprising polypeptide sequences that bind to IgG inhibitory receptor and native IgE receptor, useful for treating IgE-mediated hypersensitivity reactions, e.g. asthma or allergies, or autoimmune diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
```

The present invention relates to a fusion molecule comprising a first

Claim 64; Fig 2; 116pp; English.

```
polypeptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor (FcepsilonR). Also provided are nucleotide sequences encoding such a fusion protein. The fusion molecules and compositions are useful for treating an IgE-mediated biological response, preferably an IgE-mediated hypersensitivity reaction, such as asthma, allergic rhinitis, atopic dermatitis, severe food allergies, chronic urticaria, angioedema or anaphylactic shock; or autoimmune diseases such as rheumatoid arthritis, crype-I diabetes mellitus, or multiple sclerosis, and for preventing of or symptoms resulting from, a type I hypersensitivity reaction in a subject receiving immunotherapy. The present sequence is the human IgGI
                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                      99 EPKSCDKTHTCPPCPAPELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKF 158

The present invention relates to a fusion molecule comprising a first polypeptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, cunctionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgB receptor (Repsilona). Also provided are nucleotide sequences encoding such a fusion protein. The fusion molecules and compositions are useful for treating an IgE-mediated biological response, preferably an IgE-mediated Mypersensitivity reaction, such as asthma, allergic rhinitis, atopic dermatitis, severe food allergies, chronic urticaria, angicedema or anaphylactic shock; or autoimmune diseases such as rheumatoid arthritis, type-I diabetes mellitus, or multiple sclerosis, and for preventing of, or symptoms resulting from, a type I hypersensitivity reaction in a subject receiving immunotherapy. The present sequence is a gammahinge-CHgamma2-CHgamma3-(Gly4Ser)3-CHepsilon2-CHepsilon3-CHepsilon3 fusion trotein (designated GE2) of the invention

                                                                                                                                                                     This invention relates to a novel MUC1 chimeric protein which comprises a first polypeptide sequence and a second polypeptide sequence, where the first polypeptide sequence is a MUC1 extracellular (MUC1-EC) polypeptide, and the second polypeptide sequence is a human immunoglobulin FC polypeptide or a human abumin polypeptide. The invention may be useful for the development of compounds with a cytostatic activity acting as MUC1 antagonists or CD27 antagonists. The MUC1 chimeric protein is useful in preparing a composition for treating cancer. The present sequence is that of a protein which was used during the development of the novel MUC1 chimeric protein of the invention.

Also included are an FC-fusion protein comprising an FC region substantially identical to that of the corresponding unmodified FC-fusion protein, a modified fC-fusion protein with an in vivo mean elimination half-life at least about 1.3-fold longer than that of the corresponding unmodified FC-fusion protein, a modified CC IgG class antibody fragment (comprising a heavy chain constant region or FC-region where at least one amino acid residue selected from that group consisting of residues 250, 314, and 428 is different from that present in the unmodified IgG class antibody), an isolated polynucleotide molecule encoding a polypeptide comprising a sequence at least 90% identical to a sequence selected from ADS69600-ADZ69656, an isolated polypeptide comprising an amino acid sequence at least 90% identical to a sequence selected from ADS69600-ADZ69656, an isolated comprising at least one amino acid sequence at least 90% identical to a sequence selected from ADS69600-ADZ69656, an isolated comprising at least one amino acid residue as cited above, and that present in the FC-fusion protein) and a method of producing a modified FC-fusion protein) and a method of producing a modified FC-fusion protein with an altered binding affinity for protein and altered with the unmodified FC-fusion protein and a method of producing a moder of producing a moder of producing a method of producing a method of producing a moder of producing a method of producing a moder of producing a method of producing a method of producing a moder of producing a method producing a me
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein (comprising preparing an expression vector comprising a suitable promoter operably linked to DNA encoding at least a constant region of an 1gG heavy chain, transforming host cells with the vector and culturing the transformed host cells to produce the modified 1gG Fc fusion protein). The modified antibody has a higher affinity for FcRn at pH 6.0 than at pH 8.0. The fusion proteins are useful for studying protein function in vitro and in vivo and as potential therapeutic and diagnostic agents. The present sequence represents a human 1gG1 heavy chain constant region with an amino acid substitution at residue 250, 314 or 428 (Kabat numbering, the actual residue that is mutated is covered in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New modified Fc-fusion protein where at least one amino acid residue from the heavy chain constant region, useful for studying protein function in vitro and in vivo and as potential therapeutic and diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BPKSCDKTHTCPPCPAPELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKF 158

A novel recombinant vector has been developed which comprises a nucleotide sequence encoding a fusion protein. The fusion protein comprises three domains joined together in order, from N-terminus to terminus, of a first domain comprising a protein of interest, a second domain comprising an hydrophilic spacer and an affinity domain, each domain comprising amino acid residues. The present sequence represents the hinge/Fc region of human 19G1, used in example 3 of, the present invention. The recombinant vector is used for the production of authentic recombinant proteins of interest. The method of the invention is useful for the expression of fusion proteins capable of isolation by affinity chromatography in pro- or eukaryotic cells. This method allows for the efficient cleavage and generation of authentic proteins of interest that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 NWYVDGVEVHNAKTKPREEQYNSTYRVVSVLTVLHQDWLNGKEYKCKVSNKALPAPIEKT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  121 ISKAKVQPREPQVYTLPPSRDELTKNQVSLTCLVKGFYPSDIAVEWESNGQPENNYKTTP 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence was used in the production of AGP-1 fusion proteins. AGP-1 is a type II transmembrane protein. The fusion proteins comprise an PC immunoglobulin region fused to the N-terminal portion of the AGP-1 protein. The fusion proteins can be used to induce apoptosis in a tissue, and to treat proliferative disorders, immune disorders, or virally-induced disorders. The proliferative disorders include cancers, such as breast, prostate, lung or colon cancer. The viral infections include hepatitis, and acquired immunodeficiency syndrome (AIDS), and the immune disorders may be autoimmune disorders or transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

The present invention relates to a method for the prevention or treatment of lytic bone disease or multiple myeloma. Also the method can be used for preventing metestasis of cancer to bone or osteosclerotic bone metastasis. The method comprises administering an OPG (osteoprotegrin) polypeptide or OPG fusion protein. The OPG proteins (see AAB80898-AAB80965) can inhibit formation of osteoolasts (and thus bone resorption) by blocking differentiation from monocytes/macrophage precursors. The present sequence is the hinge, CH2 and CH3 regions of human IgGgammal. This sequence can be used to generate fusion proteins of OPG and immunoglobulin, for use in the present invention. The generated fusion proteins can exhibit increased circulating half-lives and slower clearance times, thereby providing a more sustained activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NWYVDGVEVHNVKTKPREEQYNSTYRVVSVLTVLHQNWMNGKEYKCKVSNKALPAPIEKT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The patent discloses fusion protein comprising human osteoprotegerin (OPG) protein fused by linker to human 1961 Fc portion. OPG negatively regulates formation of osteoclasts in vitro and in vivo. It blocks the differentiation of osteoclasts from monocyte or macrophage precursors and the reabsorption of bone. The OPG-Fc fusion protein is administered for the treatment of bone loss resulting from osteoporosis, Paget's disease, osteomyelitis, hypercalcaemia, osteopenia associated with surgery or steroid administration, osteonecrosis, bone loss due to rheumatoid arthritis, periodontal bone loss, osteolptic metastasis and/or prosthetic loosening. The present sequence is partial human immunoglobulin G (Ig G) i protein comprising the hinge and heavy chain constant regions CH2 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

The invention relates to a method for increasing and maintaining haematocrit in a mammal. The method comprises administering a hyperglycosylated analogue of erythropoletin (Bpo) in a pharmaceutical composition, less frequently than an equivalent molar amount of and at a lower molar amount than recombinant human Bpo (rHuBpo) to obtain a comparable target heamatocrit. Bpo is a glycoprotein hormone necessary for the maturation of erythroid progenitor cells into erythrosytes. Human Bpo analogue is useful for raising and maintaining haematocrit to a comparable target heamatocrit in a mammal suffering from anaemia associated with a decline or loss of kidney function, myelosuppressive therapy comprising chemotherapeutic or anti-viral drugs or associated with excessive blood loss during surgical procedures, and in cancer condition. The present sequence is human immunoglobulin G (IgG) gamma 1 constant heavy chain (CH2, CH3) hinge region used to construct Bpo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

The invention relates to a compound comprising an immunoglobulin (Ig)

Control of the capable of binding an amyloidogenic protein. The invention is peptide capable of binding an amyloidogenic protein. The invention is peptide capable of binding an amyloidogenic protein. The invention is consetul for clearing an amyloidogenic protein protein in the invention is peptide capable of binding an amyloidogenic protein in the invention is consetul for clearing an amyloidogenic protein with anyloid polypeptide (TARP), atrial natriuretic factor (ARP), islet amyloid polypeptide (TARP), atrial natriuretic factor (ARP), islet amyloid polypeptide (TARP), atrial natriuretic factor (ARP), sappa light chain, lambda light chain, amyloid a publect and for treating an amyloidogenic disorder such as Alzheimer's disease and spongiform encephalopathy. Disorders treatable anyloid cardiomyopathy), PPP (eg. spongiform encephalopathies, including creapie in sheep, bovine spongiform encephalopathies, including creapie in sheep, bovine spongiform encephalopathies, including creapie in sheep, bovine spongiform encephalopathy in cows and creating anyloid sease (CJ) and derstmann-Straussler-Scheinker creating anyloidosis, myeloma), amyloid A (eg. amyloidosis), Apo A-I (eg. hereditary non-neuropathic systemic amyloidosis), Gelsolin (eg. familial amyloidosis of Finnish type), Fibrinogen (eg. hereditary renal amyloidosis of Fibrinish type), Fibrinogen (eg. hereditary renal amyloidosis of Fibrinish type), Fibrinogen (eg. hereditary renal amyloidosis of
                                                                                                                                                                                                                      Human, amyloidogenic protein, Alzheimer's disease, Huntington's disease, spongiform encephalopathy; familial amyloid cardiomyopathy; amyloidosis, Gerstmann-Straussler-Scheinker syndrome; spongiform encephalopathy; 36S5, Creutzfeldt-Jacob disease, insulinoma; diabetes; body myocytis; myeloma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel therapeutic agent useful for treating an amyloidogenic disorder, e.g. Alzheimer's disease, comprises an immunoglobulin heavy chain constant region linked to a peptide capable of binding amyloidogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 97.2%; Score 1225; DB 5; Length 232; 97.0%; Pred. The therapeutic agent of the invention is useful for treating endotoxin induced disease, such as endotoxic shock. The present amino acid sequence represents a human protein which is claimed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 EPKSCDKTHTCPPCPAPELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a compound (I) binding to tissue factor (TF).

The compound (I) has the formula A-(LM)-C, where A is a FVIIa polypeptide, LM is an optional linker group, C comprises an impurpational to the group, C comprises an impuratory effector domain, and (I) binds to TF. (I) inhibits TF-mediated activated factor VII (FVIIa) activity. (I) is useful as a medicament, and for the manufacture of a medicament for preventing or treating disease or disorder associated with pathophysiological TF activity. The disease or disorder associated with pathophysiological TF activity are deep venous thrombosis, arterial thrombosis, post surgical thrombosis, coronary artery bypass graft (ARBG), percutaneous transdermal coronary angloplastry (PTCA), stroke, cancer, tumor metastasis, and restenosis following angloplastry, acute and chronic indications such as inflammation, septic shock, septicemia, hypotension, adult respiratory distress syndrome (ARDS), disseminated intravascular cagulopathy (DIC), pulmonary embolism, platelet deposition, myocardial infarction, or prophylactic treatment of mammals with atherosclerotic vessels at risk for thrombosis. The present sequence represents the Fc domain fragment of human immunoglobulin GI (19GI).

CHUEPO), a peptide linker, and a human 19G Fc variant, is new.

CHUEPO), a peptide linker, and a human 19G Fc variant, is new.

CHUEPO, a peptide linker, and a human 19G Fc variant, is new.

CHOSTORIANS are also included for the following: a chinese hamster

COVATY (CHO)-derived cell line producing the HUEPO-L-VFC fusion protein in

its growth medium in excess of 10 kmicro;g per million cells in a 24 hour

period; and a method for making a recombinant fusion protein comprising

HUEPO, a flexible peptide linker, and a human 19G Fc variant. Preferred

Protein: The peptide linker containing 20 or fewer amino acids is present

between HUEPO and the human 19G Fc variant, and comprises two or more

amino acids selected from glycine, serine, alanine, and threonine. The

human 19G Fc variant comprises a hinge, CH2, and CH3 domains of human

19G2 with Pro311Ser mutation comprising 436 amino acids (SEQ ID NO. 18).

It also comprises a hinge, CH2, and CH3 domains of human 19GH with

Ser228Pro and Leu235Ala mutations comprising 437 amino

20). It further comprises a hinge, CH2, and CH3 domains of human 19GH

with Leu234Val, Leu235Ala mutations comprising 435 amino

cids (SEQ ID NO. 22). The HUEPO-L-VFC fusion protein exhibits in vitro

biological activity similar to or higher than that of rHuEPO on a molar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New recombinant HuEPO-L-vFc fusion protein comprises human erythropoietin (HuEPO), a peptide linker, and a human 1gG Fc variant, useful for treating chronic anemia due to renal diseases, cancer chemotherapy, or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel purified polypeptide comprising any of SEQ ID NOs: 3, 7, 9, 11, 45 or 88, or an amino acid sequence that is 95% or more identical to the amino acid sequences and which includes an immunoglobulin like domain structure. The polypeptide of the invention demonstrates immunosuppressive, cytostatic and antiinflammatory activities and is a splean-expressed (SPEX) polypeptide. The methods and compositions of the present invention may useful for modulating lymphocyte activation and the immune response in a variety of conditions lincluding autoimmunity, cancer, transplant rejection and inflammation. Such modulation may be achieved via the use of gene therapy. The current sequence is that of the human spleen-expressed (SPEX) receptor-related
                                                                                                                                                                                                                                                                                New purified spleen expressed (SPEX) polypeptide useful for modulating lymphocyte activation and the immune response in disorders including autoimmunity, cancer, transplant rejection and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 EPKSCDKTHTCPPCPAPELLGGPSVPLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKF

gramma 4 chain constant region - pig (fragment)
Cispecies: Sus scrota domestica (domestic pig)
Cispecies: Sus scrota domestica (domestic pig)
Cispecies: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 21-Jan-2000
Ciscossion: 147162
Cispecies: 1: Sun, J.; Butler, J.E.
J. Immunol. 153, 3856-3873, 1994
A.Fitle: Five putative subclasses of swine IgG identified from the cDNA sequences of a significant number: 147169; MUID:95015845; PMID:7930579
A;Reference number: 147162
A;Accession: I47162
A;Accession: I47162
A;Accession: I47162
A;Residues: preliminary; translated from GB/EMBL/DDBJ
